

Communication terminal handling messages including graphics.**ABSTRACT**

- 5 A communication terminal for handling messages and having a controller, a transceiver for communicating with a wireless communication network, and a user interface through which the user operates the terminal. The user interface includes a display. The said communication terminal furthermore comprises a message editor application by means of which the user is
- 10 allowed to generate a compound message including a text part and at least one graphical icon part. The controller generates a message for transmission via said transceiver, and the message includes a text part in a predefined message text character format, a graphical part including a record for each of said at least one graphical icon part in a graphical format, and information in
- 15 the message defining the position of said at least one graphical icon part in the text part.
